DETAILED ACTION

Responsive to communications entered 6/8/2006. Claims 1-10 are pending. Claims 6,9 and 10 are withdrawn. Claims 1-5,7,8 are examined herein.

Election/Restrictions

- 1. Applicant's election with traverse of group II, claims 2, 7 and 9 in the reply filed on 6/8/2006 is acknowledged. The traversal is on the ground(s) that a prior art search for inventions I and II is coextensive. This is found persuasive and groups I and II are hereby rejoined.
- 2. Applicant's election with traverse of the species of "steroids" in the reply filed on 6/8/2006 is acknowledged. In the interest of compact prosecution, claims 6,9,10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 6/8/2006.

Priority

3. This application is a CON of 10/263,195 10/03/2002 (now ABN) which is a CON of 09/607,925 06/30/2000 (now ABN) which is a CON of PCT/SE98/02413 12/22/1998.

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Sweden on 12/30/1997. It is noted, however, that applicant has not filed a certified copy of the 9704919-1 application as required by 35 U.S.C. 119(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that

form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-5,7,8 are rejected under 35 U.S.C. 102(b) as being anticipated by Whitcombe et al (1995 JACS 117:7105-7111).

The claimed invention is drawn to a method for specific removal of a compound from a mixture of related structures representing a combinatorial library comprising using a molecularly imprinted polymer. Claims 2-5,7,8 represent variations thereof.

Whitcombe et al teach, throughout the document and especially figure 2d a method of preparing a molecularly imprinted polymer, which is used for the specific adsorption (removal or screening) of cholesterol versus four other related derivatives. Because a combinatorial library can have as few as two members and cholesterol is a biological steroid chemical, the method of Whitcombe et al reads on the limitations set forth in claims 1-4, 5 (elected species), 7 (elected species) and 8 (elected species).

5. Claims 1-5,7,8 are rejected under 35 U.S.C. 102(b) as being anticipated by Bystrom et al (1993 JACS 115:2081-2083).

Bystrom et al teach, throughout the document, and especially table 1, a method of using a molecularly imprinted polymer for chemoselective for the reduction of specific steroid derivatives. Said reduction of Bystrom has the effect of specific removal of a steroid from solution or may comprise part of a screening method for a steroid of interest, thus the method of Bystrom et al reads claims 1-4, 5 (elected species), 7 (elected species) and 8 (elected species).

6. Claims 1-5,7 and 8 rejected under 35 U.S.C. 102(e) as being anticipated by Mosbach et al (US Patent 6255461).

Mosbach teach, throughout the document and especially table 4, ELISA and RIA methods for assessing the selectivity of molecularly imprinted polymers for retaining (selective removal or screening) of cortisol versus other steroids, which reads on the method and limitations set forth in claims 1-4, 5 (elected species), 7 (elected species) and 8 (elected species).

Conclusion

Claims 1-5 and 7-8 are not allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher M. Gross whose telephone number is (571)272-4446. The examiner can normally be reached on M-F 9-5:30.
